About Transcript

be useful to food truck owners: viewing recent sales, understanding what items are popular, and knowing the best location to visit each day.

3:15 As you consider your app, remember that charts should direct attention and provide focus to the most important information in your experience. Now that we've established what we want to communicate, let's look at how to achieve this using charts.

3:29 To illustrate recent sales, a chart showing change over time will be appropriate.

3:34 One way of doing this is to use a bar chart showing sales totals for each of the last 30 days. We will add axis labels soon, but first, it needs a description to tell someone what the chart represents.

3:47 A title like "Sales in the Past 30 Days" labels the elements of the chart but doesn't communicate anything more. How can we summarize the information being shown? A chart should be accompanied by text that describes the chart contents.

4:01 If read in isolation, it should be informative.

4:04 Adding the total number of pancakes sold transforms the title into a self-contained description.
